

**Product manual of Zhejiang Jiarun New Material Co., Ltd**

**Product brand: tl-2350**

**Product Description:**

This product is a pure acrylate self crosslinking anionic emulsion, specially designed for durability crushing.

Foam coating design. It is used for decorative cloth, furniture cloth and sofa cloth with good shading property. The emulsion has good low temperature resilience, good dry and wet washability, and no plasticizer is needed. Good cold flexibility can be obtained. Soft and smooth coating can be obtained.

**characteristic:**

TI-2350 fabric latex has the characteristics of good low temperature resilience, dry resistance and good wet washing property.

Moreover, good cold flexibility can be obtained without adding plasticizer. TI-2350 was mechanically foamed, The foam is quick and foam is meticulous and stable. It is suitable for defoaming and foam stabilization, and can

be made soft and flat Slippery coating.

**Product features:**

Appearance: milky white with blue liquid

Solid content: 49% - 50%

Viscosity: 100-500 CPS

PH value (25 °C): 2.0-4.5

Glass transition temperature: - 21 °C
